Prof. Raul Figueiro is currently professor and senior researcher in the School of Engineering at the University of Minho, Portugal. He is the Head of the Fibrous Materials Research Group of the same university with expertise in advanced materials (nano, smart, composites) and structures (3D, auxetic, multiscale) with 35 researchers. He is the mentor and the coordinator of the FIBRENAMICS International Platform (www.fibrenamics.com) including 250 partners developing promotion, dissemination, technology transfer and research activities on fiber-based advanced materials. He has more than 145 published papers in international reputed scientific journals, 400 conference publications, 36 books and 14 patents. He is the scientific coordinator of several national and international research projects on advanced fibrous and composite materials, mainly for building, architectural and health-care applications. He supervised various PhD and Pos-Doc scientific works and is an expert of the European Technological Textile Platform and member of the editorial board of several leading international scientific journals on composite and fibrous materials.
